**PAINTING PLANTS
WITH INDUSTRY
4.0 TECHNOLOGIES**

A photograph of an industrial painting plant. Numerous white, rectangular panels with vertical slats are hanging from an orange overhead conveyor system. The facility has a high ceiling with industrial lighting and structural beams. The background shows more of the plant's infrastructure, including safety railings and equipment.

OUR VALUES

EFFICIENCY

RELIABILITY

CUSTOMER ORIENTATION

A photograph of an industrial painting plant. A robotic arm with a spray gun is positioned over a conveyor belt. The background shows the structure of the plant with overhead lights and a fire extinguisher on the wall.

**WE OFFER
FLEXIBLE
SOLUTIONS
FOR
MANUFACTURING**

The image shows a large industrial facility, likely a paint shop, with a high ceiling and complex overhead infrastructure. A prominent overhead crane system, labeled 'FLEXY SYSTEM' with the website 'www.vidalifinishing.com', spans the width of the room. Below the crane, numerous vertical racks are filled with white-painted window frames and door casings, organized in rows. The racks are supported by a sturdy metal frame. In the background, large windows allow natural light into the space. The overall scene depicts a professional environment for the finishing and painting of architectural components.

CONTROL PANEL

A large industrial facility, likely a factory or workshop, featuring a complex network of large, silver, corrugated metal ducts and pipes. The ducts are arranged in a series of curves and bends, some running horizontally and others vertically. Below the ductwork, there is a large, white, rectangular structure, possibly a painting booth or a storage unit. In the foreground, two workers are visible, one wearing a dark jacket with "ALUTECH" on the back. The floor is a light-colored, polished surface. To the right, there are two blue plastic bins and a large, white, rectangular unit with several warning labels. The overall scene is industrial and well-lit.
